

ABOUT VESCO SCIENCE

Advancing Biotechnology Through Science & Manufacturing

Vesco Science Co., Ltd. is a South Korea-based biotechnology company focused on the research, development and manufacturing of advanced solutions for regenerative medicine, aesthetics and professional healthcare applications.

By connecting scientific development with controlled manufacturing, Vesco Science works to transform innovative biological technologies into reliable, scalable and market-ready solutions.

WHO WE ARE

Where Science Meets Scalable Manufacturing

At Vesco Science, we believe that meaningful innovation requires more than scientific discovery. It requires the ability to translate research into reproducible formulations, controlled manufacturing processes and consistently documented products.

Our capabilities bring together:

Research & Development

Scientific exploration and product development.

Advanced Biotechnology

Platforms including exosome, PDRN/PN, peptide and regenerative technologies.

Formulation Development

Development and optimization of formulations according to product requirements.

Manufacturing

Controlled production, filling and packaging capabilities.

Quality & Analysis

Product-specific testing, documentation and quality control.

OUR SCIENTIFIC APPROACH

FROM BIOLOGICAL SCIENCE TO FINISHED PRODUCT

At Vesco Science, we follow an integrated approach that connects scientific research with product development, controlled manufacturing, and quality assurance. From the initial biological concept to the finished product, each stage is designed to support consistency, precision, and product integrity.

MANUFACTURING

From Development to Production

Scientific innovation becomes commercially valuable when it can be translated into a controlled and scalable manufacturing process.

Our manufacturing approach connects:

R&D

QUALITY

Quality Built Into Every Stage

At Vesco Science, quality is integrated throughout the entire product lifecycle — from raw material selection and process development to manufacturing, testing, documentation, storage and distribution.

Our quality approach is designed to support **product consistency, process control, traceability and integrity** while meeting the defined requirements of each product and market.

OUR QUALITY APPROACH

01 — Raw Material Control

Raw materials are carefully evaluated against defined specifications before entering the manufacturing process. This helps ensure material consistency, suitability, and quality from the very beginning.

02 — Process Control

Manufacturing processes are performed under defined and monitored conditions. Controlled procedures help maintain consistency, reproducibility, and reliable production across batches.

03 — Analytical Testing

Product-specific analytical testing is used to evaluate key quality attributes and characteristics. Testing helps verify that products meet their defined specifications and quality requirements.

04 — Microbiological Testing

Relevant microbiological assessments are conducted according to product requirements and applicable standards. These controls help support product safety, quality, and microbiological integrity.

05 — Batch Traceability

Each batch is supported by documented manufacturing and quality information. This enables traceability from raw materials and production through testing, review, and final release.

06 — Storage & Distribution

Products are stored and transported according to their defined storage and handling requirements. Appropriate conditions help maintain product integrity and quality throughout the supply chain.

GLOBAL PARTNERSHIP

Vesco Science × EverCeutical

Strategic Global Partnership

Vesco Science collaborates with EverCeutical for the global marketing and commercialization of selected Vesco Science products, including exosome, filler and peptide-based solutions.

OUR VISION

Building the Future of Regenerative Biotechnology

We envision a future where advanced biotechnology can be developed, manufactured and delivered through reliable scientific and quality-driven systems.

Our focus is on building technologies and partnerships that contribute to the continued advancement of regenerative medicine and professional aesthetic solutions.

OUR MISSION

Science With Purpose. Manufacturing With Precision.

Our mission is to connect:

Scientific Research

-

Advanced Technology

-

Manufacturing Excellence

-

Quality Systems

to create innovative solutions for a rapidly evolving global biotechnology market.

FINAL CTA

Let's Build the Next Generation of Biotechnology

Whether you are looking for advanced biotechnology platforms, product development or an OEM/ODM manufacturing partner, Vesco Science is ready to explore new opportunities.
